How it Works

Hybrid working is a reality for today's modern, corporate workforce. Employees expect it and organisations want to embrace it. But it comes with a price if not managed right – the price of data exposures and security compromises.

Cyber criminals target employees working away from the office through a variety of means, including phishing, social engineering and ransomware attacks. Most technologies that enable remote working such as VDI infrastructures and VPN gateways are under increasing attack. This is an issue that businesses cannot ignore.

About SVDI

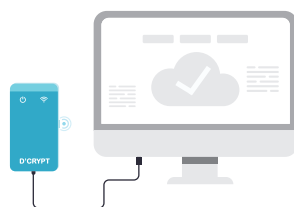

SVDI is a stylish, portable and powerful zero client device in the "Secure Computing Anywhere" (SCA) product family for accessing virtual desktops from anywhere without compromising security. SVDI, and Internet connection, is all you need for a productive mobile workforce.

01 Forget the need to carry additional laptops and multiple devices.

02 Slip the lightweight SVDI in your pocket.

03 Simply plug it into a monitor anytime, anywhere to start working immediately.

Change the way you work for the better

Reduce Cyber Security Risks

The SCA family of products reduces cyber attack surface and provides end-to-end protection for data in transit and at endpoints, and complements built-in security offered by VDI solutions. Specifically, SVDI eliminates exposure to ransomware infections, data loss and data leakages.

Decrease Operating Costs

Replace existing endpoints of your workforce with SVDI at a fraction of the cost of a laptop and without the need for investing in costly endpoint protection and monitoring tools.

Reduce Your Carbon Footprint

Support your CSR (Corporate Social Responsibility) policies and green initiatives with this low-power-consumption zero-client device.

Make maintenance of endpoints easier with SVDI

- Allows centralised management and efficient maintenance of end-user computing.
- Requires no configuration and no additional software.
- Simplifies device licensing.
- Supports the set-up of new users in no time, with no onerous configurations, no installation of DLP agents, no antivirus agents, etc.
- Provides operational and security updates in the background with no disruption to employee productivity.

Specifications

- Less than 300g.
- Dimensions comparable to a typical mobile phone*.
- Supports secure access of mainstream VDI services such as Citrix, VMware Horizon, Microsoft Virtual Desktop and RDP services.

Secure Computing Anywhere for your business.
