How it Works

Cloud Computing

Concentrator[1]

Data Center

Secure Encrypted Connection

Virtual Desktop Infrastructure

Wi-Fi

Supports Multi–Factor Authentication

Hybrid working is a reality for today's modern, corporate workforce. Employees expect it and organisations want to embrace it . But it comes with a price if not managed right — the price of data exposure and security compromises.

Cyber criminals target employees working away from the office through a variety of means, including phishing, social engineering and ransomware attacks. Most technologies that enable remote working such as VDI infrastructures and VPN gateways are under increasing attack. This is an issue that businesses cannot ignore.

About SCA–R

SCA–R is a stylish, portable and powerful zero client device in the "Secure Computing Anywhere" (SCA) product family for accessing virtual desktops from anywhere without compromising security. SCA–R and internet connectivity are all you need for a productive mobile workforce.

01 Forget the need to carry additional laptops and multiple devices.

02 Slip the lightweight SCA–R in your pocket.

03 Simply plug it into a monitor anytime, anywhere to start working immediately.

Change the way you work for the better

Reduce Cyber Security Risks
The SCA family of products reduces cyber attack surface and provides end–to–end protection for data in transit and at endpoints, and complements built–in security offered by VDI solutions. Specifically, SCA–R eliminates exposure to ransomware infections, data loss and data leakages.

Decrease Operating Costs
Replace devices for your workforce with SCA–R, at a fraction of the cost of a laptop without the need to invest in endpoint protection and monitoring tools.

Reduce Your Carbon Footprint
Support your CSR policies and green initiatives with this low–power consumption zero–client device.

Make Maintenance of Endpoints Easier with SCA–R
• Allows centralised management and efficient maintenance of end–user computing
• Requires no configuration and no additional software
• Simplifies device licensing
• Supports the set–up of new users in no time, with no onerous configurations, no installation of DLP agents, no antivirus agents, no security monitoring software and no other data security safeguards
• Provides operational and security updates in the background with no disruption to employee productivity.

Specifications

• Less than 150g
• Dimensions comparable to a typical mobile phone
• Supports secure access of mainstream VDI services such as Citrix, VMware Horizon, Microsoft Virtual Desktop and RDP services.

Secure computing for your business anywhere. Contact us for more information and product specifications.
